

Lexus 2000 ES300 OEM Radio Removal

Page 1 of 21

These instructions are for the removal of the Pioneer Radio & tape player (OEM version) from the center of the dash in a 2000 Lexus ES300. It appears that the technique will also work on most post-1998 models; ie, the current design ES300. It should also work on other models of Lexus and radios.

This starts with the usual game of “Find the Bolts”. Experience shows that Toyota/Lexus uses four (4) metric 10mm bolts (two on the top and two at the bottom) to hold the DIN frame to the dash chassis. The 1-, 2- or 3-DIN slot frame then holds the radio/tape player/CD player and sometimes other controllers. Here we will see that it holds a 2-DIN Pioneer radio & tape player combo in the top two slots. The 3rd slot (bottom) holds a DIN sized air-conditioner controller assembly.

Now – “The Usual Warnings”

- When I say “pry off the ...” mask off both surfaces first or you’ll scratch something.
- To pry, use a wide, flat & sturdy tool such as this:

A knife blade will scratch things and probably snap off.

- Place a towel over your shift level and center console or a scratch is guaranteed!
- You’ll probable have to put the shift lever into drive or neutral to get the radio out. Please put on your parking brake first or you’ll get one heck of a headache when your pretty Lexus rolls into the house across the street.

Page 2 of 21

Now, back to the game. Where are the 4 10mm bolts hidden?

Notice that filler strip below the A/C controller and above the ashtray?

Lexus 2000 ES300 OEM Radio Removal

Page 3 of 21

Use a flat tool, insert it below the A/C button and pry out the right side a bit.

Now move to the left side. Insert the tool below the Temperature knob and pry out a bit.

Back to the right side then the left again. You can even insert the tool on the right and left edges of the filler strip. It will pop out.

Lexus 2000 ES300 OEM Radio Removal

Page 4 of 21

It's only held in by two snap-clips.

There are the bottom two gold colored 10mm bolts. I'm touching one with the tool. Don't loosen them yet.

Lexus 2000 ES300 OEM Radio Removal

Page 5 of 21

Now, the hunt for the top two 10mm bolts.

Look at that seam between the black A/C grill & Clock assembly and the wood grain radio. Insert the tool in the seam, to the right of the LEXUS Premium Sound System logo. Pry the A/C vent out a little.

Lexus 2000 ES300 OEM Radio Removal

Page 6 of 21

Now switch to the left side; pry on the vent at the same height near the Warning Flasher button.

>>>>>

Next, switch to the top right side of the vent. Insert the tool and pry a little.

Now switch to the top left side of the vent and pry. The entire black vent/clock assembly should be moving out. It's only attached by four clips.

Grasp the vent with your hand and give it a tug.

Lexus 2000 ES300 OEM Radio Removal

Page 7 of 21

Out it comes. See the two upper clips?

Disconnect the two connectors on the back. One is for the Emergency flashers and one for the clock. No need to label them, they're very different

Lexus 2000 ES300 OEM Radio Removal

Page 8 of 21

Now look down the hole. The top two gold 10mm bolts! The silver metal part is the 3-DIN rack. Also notice the bottom clip on the vent, there's another one on the bottom right corner of the vent.

You now have all 4 10mm bolts exposed. Note that Lexus uses a plastic hanger pin at each bolt location. You can remove all of the bolts and the DIN rack will stay in place – nice touch! Remove the bottom two bolts completely. They are about 25mm long so it will take a while. Be careful – don't drop the bolts into the dash. Now remove the top two 10mm bolts.

Put the parking brake on and place the gear shift into the "2" or LOW position. Grab the radio and A/C controller with two hands and slide it out.

Page 9 of 21

There are four or five connections on the back side of the radio:

- R2 – DC Power & GND
- R3 – Speakers and controls
- R4 – Multi-Display (not included on my Pioneer)
- ANT1 – a small antenna jack
- ANT2 – the older style, large antenna jack

I don't have the CD player installed in the Glove box, but the cable is there.

The following connector chart and schematic were found on the Euro Lexus Owner's Club Forum by Rodders_UK. <http://www.teamlexus.co.uk/forums/viewthread.php?tid=1676>

Lexus 2000 ES300 OEM Radio Removal

Page 10 of 21

Here is the 3-DIN rack with the double DIN radio in the top two slots and the single DIN packaged A/C controller in the bottom slot. Remove the two antenna connectors first, then the two (or three) power/speaker connectors next. Last, remove the two connectors on the back of the A/C controller. Every connector is different, you shouldn't have to label them.

Look closely and you'll see that the radio is a standard Double-DIN with wings. The left wing holds the volume knob and scanner rocker switch. The right wing holds the four function select buttons for the AM, FM, Tape and CD. This probably means that any double DIN or 2 single DIN radios/tape decks/CD Players will fit. The wing gaps will need to be covered with a new, custom fascia plate.

Note that four (4) gold hex head screws on each side hold the radio in the rack. Two (2) black Philips head screws hold the A/C controller in place.

Notice that there is plenty of room in the radio hole, down in the dash. There shouldn't be any problem installing an RF modulator on the OEM radio. There is also easy access to the glove box area on the right side. You can easily see the CD cable going out that way. You also have easy access to the ashtray area down below. Removing the ashtray should free up room for a MD player or MP3 player. I couldn't figure out how to get the ashtray out, that will be the subject of the next workshop!

Page 11 of 21

Now, for a look at the radio.

See the R2 and R3 connectors? I think the blanked off area on the lower right is for the R4 connector that I don't have. At the top left, see the two antenna connector holes?

Here's a shot of the R2 & R3 connectors from the bottom:

Lexus 2000 ES300 OEM Radio Removal
Page 12 of 21

And finally, the label on the bottom of the Pioneer radio.

TXM +/- is the serial data bus used by the head unit & the CD player to pass control & data (CD text) information. The BlitzSafe adapter sends a fake message to the HU to fool it into thinking a CD player is attached & ready.

When the HU is switched to radio or tape, the external music source continues to play over the desired sound. Switching the HU to CD is simply a way to get the HU to not play any other sounds in addition to the external music.
