9. INSTALL CAMSHAFTS

#### NOTICE:

Since the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head receiving the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

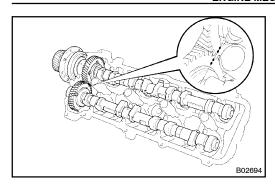

(a) Set the crankshaft pulley position.

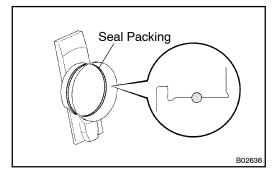

Turn the pulley clockwise or counterclockwise, and put the timing mark of the crankshaft pulley in line with the centers of the crankshaft pulley bolt and idler pulley bolt.

#### NOTICE:

Having the crankshaft pulley at the wrong angle can cause the piston head and valve head to come into contact with each other when you install the camshaft, causing damage. So always set the crankshaft pulley at the correct angle.

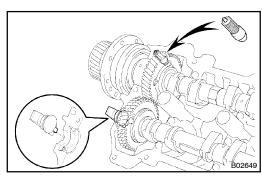

- (b) Install the LH camshafts.
  - (1) Apply MP grease to the thrust portion of the intake and exhaust camshafts.
  - (2) Align the timing marks (2 dot marks) of the camshaft drive and driven main gears, and place the intake and exhaust camshafts.
